

OUR WONDERFUL WORLD OF COLOURS

Curiosities and wonders of colour in our world are explored through informative text and vibrant colourful images for children. Dive into the bright and beautiful world of colours, and learn about colour mixing, light and colour, warm and cool colours, colours in nature, art and colour, food and colour, colours in culture, colours and your mood, science of colour, and a lot more.

Scott Benjamin Gracie

Our Wonderful World of Colours – Did you know that light is the secret behind all the colours you see? Light may look white, but it's actually made up of many different colours.

Our Wonderful World of Colours is a book for children that touches on basic aspects of colours and our interactions them.

ABOUT THE AUTHOR

Scott believes curiosity is wonderful for developing young minds. It's what makes us want to learn more about a particular topic, find something we're interested in, and maybe lead to what we do or pursue in life for our interests, hobbies or career.

Scott's passion for light and the electromagnetic spectrum began in his early teens while tinkering with electronics as a hobby. After finishing secondary schooling at Randwick North High School in Sydney Australia, Scott was formally introduced to the lighting industry while studying Electrical and Electronics. Then in 1998 he started his career making custom light fittings and lamps in his dad's garage. Formal lighting-design qualifications expanded his opportunity to help project-manage and design on many industry levels.
